

DNAKE Cloud Platform V2.3.3 Release Note

1. Introduction

In this update, we have introduced comprehensive enhancements to the cloud platform. The improvements include indoor unit automation scenario support, alarm notification enhancements, door sensor status synchronization. This update also includes resident QR code permission configuration.

Cloud Platform Version: 2.3.2 to 2.3.3

2. Optimization

- Supports sync automation scene configuration between cloud, APP, and devices; APP can configure indoor monitor automation scenarios
- Elevator control support Free Time configuration in access rules
- Receive device door sensor status and sync to APP for real-time open/close status display in the APP device list
- Smart Pro supports calling different management machines: APP users can select different management groups for calling with group-based ring logic
- Resident QR code permission can be configured per resident account with customizable QR code refresh time

3. Bug Fixes.

- Fix some bugs
