

DNAKE Cloud Platform V3.0.0 Release Note

1. Introduction

In this update, we have introduced comprehensive enhancements to the cloud platform, focusing on rental scenarios, online payment, and license management. The improvements include Apartment validity time for temporary tenants, Rent Manager integration for the North American market, a complete online payment system with PayPal support, unified license types, optimized Community and Apartment creation flows, and refined device-side permission and license recycling logic.

Cloud Platform Version: 2.3.4 to 3.0.0

2. Optimization

- Supports setting a valid time for Apartments
- New Billing module: Billing-Marketplace for online purchase and subscription, Billing-Order Log for order records, and Billing-Device Plan for doorphone minute plans; supports PayPal payment (Deployed in selected regions only.)
- Supports online purchase of Licence integration services
- Unified license types into three: APP Call (the previous with/without indoor monitor distinction is removed), Landline Call (per-door and per-apartment payment options), and Remote Management
- Optimized Community creation with a three-step wizard (Basic Information, Community Settings, Configuration Permissions)
- Optimized Apartment creation/editing: room creation skips license selection; APP/Landline Call follows Community Cloud Call Preference
- Redefined the license recycling logic when deleting rooms, projects, or installer accounts, with updated confirmation prompts

3. Bug Fixes.

- Fix some bugs
