

DNAKE Cloud Platform Release Notes of Version

2.0.0

1. Introduction

In this update, we have implemented significant interaction and visual design updates. We have restructured the management logic to guide users step-by-step: starting with Site creation, followed by adding Buildings and Apartments, then installing Devices, and finally adding Residents. This flow better reflects the real-world sequence of installation → deployment → occupancy.

Additionally, Sites are now categorized as either Communities or Single Family, each featuring tailored management approaches for faster and more efficient operation.

- Cloud Platform Version: 1.9.0 to 2.0.0

2. New Features

- All-new interaction and visual style
- Support creating different Sites (including Communities and Single Family) with distinct management experiences
- More user-friendly management of buildings/rooms/devices/residents
- Support "Free Access" in Access Rule
- Support "Customized" type in Access Person
- Support sync resident to device phonebook
- Support New Device (S414/E214/TWK Series/IPK Series)

3. Optimization

- Enhanced configuration options for room management to improve operational experience
- Improved Dashboard experience
- Increased personnel limit in Access Rules

4. Bug Fixes.

- Fix some bugs
